Omar Alshantout

Mississauga, ON | alshantoutomar@gmail.com | linkedin.com/in/omar-alshantout

Third-year Computer Science student at McMaster University with internship experience in backend development, web development, and solutions engineering.

Education

McMaster University Hamilton, ON

Bachelor of Applied Science in Computer Science *Expected Graduation: April 2028*

- Awarded the McMaster entrance scholarship for achieving an average over 90% in high school; named to the Dean's Honour List (Winter 2026).
- Relevant Courses: Data Structures and Algorithms, Algorithms and Software Design, Operating Systems, Databases, Concurrent Systems, Computer Architecture, Discrete Math, Linear Algebra I.

Experience

Solutions Engineering Intern May 2026 – August 2026

Manela - Internship *Montreal, QC*

- Researched and documented REST API integration requirements across 12 HRIS platforms (Workday, UKG, Rippling, HiBob, BambooHR, ADP, and others), translating stakeholder needs into standardized documentation.
- Built a structured PEPM pricing model for enterprise client scenarios exceeding 1,000 employees.

Software Developer January 2026 – April 2026

Kaimz Inc - Internship *Waterloo, ON*

- Designed and built scalable backend components and automated detection pipelines for a next-generation cybersecurity platform, shipping features that power unified detection, prevention, and response for SMBs.
- Evaluated EDR/XDR platform architectures for usability, scalability, and deployment gaps, translating findings into system design decisions.
- Built and tested AI threat-detection prototypes, running simulated attack testing to validate functionality and system behavior before release.

Web Developer May 2025 – August 2025

Jusoor International - Internship *Mississauga, ON*

- Built and maintained responsive front-end interfaces using PHP, Laravel, HTML, CSS, and JavaScript.
- Integrated front-end components with Laravel back-end services and performed database and CMS updates.
- Debugged cross-browser issues and optimized site performance and user experience.

Projects

SD Detailing & Customs – Business Website | *React, JavaScript, CSS, Canvas* 2026

- Built a multi-page React website for a GTA automotive detailing and customization business, covering detailing, ceramic coating, PPF, window tint, and custom work.
- Architected the site structure: homepage, detailing landing page, customs hub, and dedicated starlights and wraps sub-pages.
- Engineered a cinematic animated hero scene using HTML5 Canvas, CSS animations, and JavaScript.

Movie Recommendation System | *Java* November 2025

- Built a recommendation algorithm that scores and ranks movies from user data and predefined criteria.
- Applied structured software engineering practices, including Maven build automation, documentation, and Git-based collaboration.
- Worked in a team setting to design, implement, and test core system functionality.

2048 Game | *C* February 2025

- Engineered a console-based 2048 game in C, managing game state through dynamic memory allocation and pointer-based grid structures.
- Optimized memory usage and game logic for smooth, efficient tile movements.
- Designed a grid-based system with low-level user input handling through scanf() and getch().

Technical Skills

Core Competencies: Python, C++, Backend Development, Data Structures & Algorithms, Git/GitHub, Problem Solving, Team Collaboration
Languages: Java, Python, C++, C, JavaScript, SQL, HTML/CSS, Haskell, Matlab
Frameworks: React, Node.js, Flask, Laravel, JUnit, WordPress
Developer Tools: Git/GitHub, Google Cloud Platform, Linux, VS Code, Visual Studio, NetBeans, Claude
Libraries: NumPy, Pandas, Matplotlib, Swing
